The diagram illustrates the recursive splitting phase of merge sort. It starts with a single array of 8 elements, which is split into two arrays of 4 elements each. These are further split into four arrays of 2 elements each, and finally into eight individual elements (arrays of size 1). Arrows indicate the flow of the splitting process from left to right.

Diagram illustrating the reduction of a 10-element array to a 3-element array in two steps:

- Initial array of 10 elements is reduced to an array of 3 elements.
- The array of 3 elements is further reduced to an array of 2 elements.
