Diagram illustrating the iterative merging of sorted arrays into a single sorted array. The process starts with 10 small sorted arrays, each of size 2. These are merged in pairs to form 5 arrays of size 4. These 5 arrays are then merged in pairs to form 2 arrays of size 8. Finally, these 2 arrays are merged to form a single sorted array of size 16. The diagram shows the progression from 10 small arrays to a single large sorted array, with intermediate steps showing the merging of pairs.
