

# How to create a new exercise?

## I. Feature Introduction

The practice feature meets the merchants' need to sell existing question bank items and provides students with a self-paced question practice tool. When students click on an answer, an explanation will appear immediately. Through repeated practice, students can enhance their memory and improve their learning effectiveness.

## II. Purpose of Use

Repeatedly practicing questions can improve students' learning effectiveness. For example, if you have 100 real exam questions to sell to students each year, you can categorize these 100 questions into one or more categories in the question bank. Then, use the practice feature to associate with the question bank category, set up the relevant practice settings, and students can purchase and practice these questions on their mobile devices.

## III. Use Scenarios

Used when students need to practice questions independently.

## IV. Operation Path

Instructor's End (Computer Management Console): Content → Create New Practice → Share  
78889100\_1699003087.png

## V. Operation Steps

**Step 1:** Enter the practice feature page and click 'Create Practice'.

### **Explanation of Relevant Settings:**

1. Practice Name: The name of the practice, such as 'Real Exam Questions for \*\* High - School Exam in 2019'. The maximum length of the practice name is 45 characters.
2. Practice Cover: The cover image of the practice. It is recommended to choose an image with a size of 750\*420px or a 16:9 aspect ratio.
4. Practice Introduction: Optional. Write a concise introduction for your practice.
5. Associated Question Bank: You can associate one or more categories under the question bank. Subjective questions are not supported for now, and relevant question types will be filtered out after selection.
6. Question Answering Settings: You can set the questions to be presented randomly or in sequence. If set to random, the specified number of questions will be randomly selected from the associated question bank. If set to sequential, the questions will be presented in the order of the associated question bank categories (if multiple question bank categories are selected, you can sort them). The specified number of questions will be cyclically selected from the question bank.
7. Number of Questions: The number of questions in a single practice session. For example, if set to 20, students will practice 20 questions each time. The maximum number of questions per practice session is 1000.
8. Difficulty Settings: Set a difficulty coefficient for your practice, which will also be displayed on the mobile device.
9. Sales Settings: You can set the practice to be free, paid, or associated with a single course for sale.
10. Display Settings: You can set whether to display or hide the practice. If you don't want the practice to be displayed in the store, you can choose to 'Hide' it. After hiding, it will not be shown in the practice list, but students who have already participated in the practice will not be affected.

**Step 3:Share the link to let students purchase.**

image.png

After creating the practice, click 'Share' to get the relevant link and QR code, and then you can promote the practice to students.

**Step 4: Click 'Data Analysis' in the practice list to view students' practice data.**
