

Going live on a computer - Tutorial for using the web version

I. Feature Introduction

The web-based instructor terminal is a tool for linking instructors to conduct live streams on the web. It is suitable for scenarios that require desktop sharing, PPT courseware display, and instructor appearance. Compared with the computer client, the web-based instructor terminal is easier to use and more straightforward to operate.

PS: You need to use Google Chrome for live streaming on the web-based instructor terminal. Google Chrome has better compatibility and can provide a better live streaming experience!

II. Purpose of Use

Using the web-based instructor terminal allows you to conveniently conduct live streams on the web, enabling live video, courseware & desktop sharing, and other live content.

III. Use Scenarios

Web-based live streaming is suitable for scenarios that require desktop sharing, PPT courseware display, and real-time video live streaming with students.

IV. Operation Path

Merchant side: Merchant background → Live streaming → Go live → Teach on the computer → Web-based terminal
