

How to edit the recorded playback of live streams?

?Scenario 1?Recorded live streaming rooms created on or after May 22, 2024

image/png

image/png

If your current recorded live streaming room was created on or after May 22, 2024, you can enter the playback settings via Live Streaming Management > and select from three modes. If you need to replace the previous live streaming playback video, you can select ☐ Mode 3 ☐ and choose a video or a previously streamed live broadcast to replace the playback video. You can refer to the above guidance.

(If your live streaming room is a "Streamed Live Streaming Room" and was created after May 22, 2024, you can also modify the playback video using this method.)

Kind reminder: If you choose to reference a historical live broadcast, currently only live broadcasts created after June 1, 2024 are supported.

?Scenario 2?Recorded live streaming rooms created before May 22, 2024

image/png

If your current recorded live streaming room was created before May 22, 2024, and you need to replace the playback video, you can click "Select File" on the live streaming details editing page, choose the video you want to replace, and after successful saving, once the transcoding is completed, the playback video that users watch in the live streaming room will be the newly replaced video. You can refer to the above guidance.
