

What should I do if the live streaming time exceeds the scheduled duration?

Scenario 1: If your live streaming duration exceeds the set time, don't worry. As long as the network remains stable, you can continue the live stream.

Note: In a video live stream, if the lecturer's teaching time has exceeded the current scheduled end time, to ensure the lecturer can proceed smoothly, it is recommended to appropriately extend the live streaming time before the scheduled end time to guarantee the smooth progress of the live stream.

Scenario 2: If your live streaming duration is less than the set time, you can manually end the current live stream by going to [Live Streaming - Live Stream Management - Live Stream List - More - End Live Stream].
