

How to create a flash sale event?

1. Create an event. In the [Marketing Center] - [Flash Sale], click "Create Flash Sale" to navigate to the event settings page.
2. Set up the event. The flash sale settings are divided into three parts: Product settings, Event information, and Reservation settings.
3. Event management and viewing. After creating the event, you can view event details such as event status, validity period, total product quantity, reservation status, purchase status, and transaction amount. Based on actual operations, you can share the event QR code and link, re - edit the event (editing is not allowed after the pre - heating period starts), and manually end the event.

For the graphic tutorial of the operation, please refer to:[Flash Sale Event Tutorial](#)
