

# Introduction to the rules for stacking coupon usage

## 1. Coupon stacking rules:

**Parallel stacking.** Both full - reduction coupons and discount coupons can be stacked.

There is no upper limit on the number of stacked coupons, but **only one coupon from the same batch can be used at a time**. For example, for an order with a product priced at 100 yuan, there is a coupon for a 50 - yuan reduction without a threshold (stackable) and a coupon for a 20% discount without a threshold (stackable). Then the final price of the product is:  $100 - 50 - (100 * (1 - 0.8)) = 30$

## 2. Does the stacking usage setting support secondary editing?

**Secondary editing is not allowed.**

## 3. Does coupon stacking support shopping cart items?

Currently **shopping cart** items are not supported.

## 4. Can stacked coupons be used in combination with marketing campaigns/super memberships?

It depends on whether the product's coupons are set to be used in combination with marketing campaigns/super memberships.
