

How to set up self-purchase commission?

Merchants can go to the backend [Marketing Center - Promoters - Settings - Promotion Rules - Benefit Settings] to enable or disable [Self-purchase Commission].

89318200_1640144469.png

1. Disable self-purchase commission

- 1) Promoters can become customers of other people.
- 2) When a promoter purchases a product, they will not receive a commission themselves.

If C is a subordinate promoter and also a customer of B, and B is a subordinate promoter of A. At this time, when C purchases a product (equivalent to B's successful promotion), B will receive the "Direct Promotion Commission" and A will receive the "Indirect Promotion Commission". As shown in the following figure:

□□□□□□2.png

2. When self-purchase commission is enabled

- 1) Promoters cannot become customers of other people (if they were customers of other people before, the customer relationship will become invalid after enabling).
- 2) When a promoter purchases a product, they will receive the "Direct Promotion Commission" themselves.

If C is a subordinate promoter of B, and B is a subordinate promoter of A.

At this time, if promoter C receives a link shared by another promoter D, they can purchase the course, but the customer relationship cannot be bound, and D cannot get the direct promotion commission.

If promoter C purchases a product (equivalent to C's successful promotion), C will receive the "Direct Promotion Commission" and B will receive the "Indirect Promotion Commission".
