1. What is the management scope? What is the purpose of setting the management scope?

The management scope determines which members' or departments' customer data and community data within the enterprise a member can view. Merchants can effectively protect the enterprise's data assets by setting the management scope for each role.

After setting the management scope for a role, members can only view the customer data and community data of members/departments within the management scope in the following functions; moreover, when selecting employee filtering conditions, they can only filter members and departments within the management scope.
