

Tutorial on Using the Bookshelf Component

I. Function Introduction

The bookshelf component is an important component for operators to customize micro - pages. By adding the bookshelf component, you can freely add pre - edited knowledge products to the micro - page and display and sell them in a bookshelf arrangement.

II. Operation Steps

1. Step One

Click “Store” - “Store Decoration” - “Mobile Store” - “Micro - page”, and then click to add the “Bookshelf” component.

image.png

2. Step Two

You can replace the cover of the knowledge products displayed on the bookshelf. Select a cover image with a ratio of 318*480 and upload it.

3. Step Three

You can also customize the component title, choose whether to display the title bar, and whether to display the “View All” entry.
